

NEXI-VIX-LIT-27

Small Form VIX VIZION Server

DESCRIPTION

NEXi (**VIX-LITE**) is engineered for Vix Vizion Imagus facial recognition workloads where high-resolution face capture is critical.

Facial data retention is fully configurable within the Imagus software, allowing operators to define how long data is stored from several days, to minutes, or immediate deletion, depending on operational and privacy requirements.

The platform supports flexible deployment, functioning either as a standalone appliance or as part of a larger integrated solution.

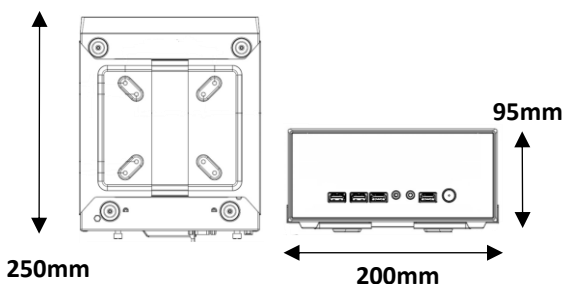

Deep, native integrations deliver seamless plug-in compatibility across multiple Video Management and Access Control Systems.
