WISENET X/**T** series

Perfectly optimized products for specific applications

WISENET

Robust Security Monitoring in Safe and Hazardous Zones and Reliable Analytics for Any Threats

The importance of video surveillance cameras is more prominent in special circumstances than anywhere else. Blind zones and special facilities such as chemical plants are often impossible to monitor, yet they require unmanned security 24/7 in case of accidents or intrusion. Hanwha Techwin provides the most advanced security solutions to secure people, property and data with a product lineup such as cameras with stainless steel parts, explosion-proof cameras, and thermal cameras for monitoring coastal areas, national borders and industrial plants all of which are hard to keep watch with human eyes.

Special Cameras

Why Stainless Steel Cameras?

Compared to conventional materials for surveillance cameras housings, stainless steel is more resistant to

 \checkmark **Corrosion** in acids and chlorine environments

Wisenet adopted 316L austenitic stainless steel that provides high toughness, from elevated temperatures up to 55°C (131 ° F) to far blow freezing down to -40°C (-40 ° F). Wisenet stainless steel cameras provide not only long term value by preventing rapid deterioration and premature replacement, also hygiene conditions and aesthetic appearance.

Applications for stainless steel cameras include: Marine, Mining, Oil & gas, Food processing, Medical/Hospitals, Clean rooms and so on

Mining

Clean rooms

Oil & gas

Hospital

True WDR performance

Conventional WDR captures images by taking 2 frames taken at different exposures, whereas Wisenet X series cameras utilize 4 frame capture at different exposure levels to create a combined image. With the development of cutting-edge WDR technology, Wisenet X series cameras address a limitation found in conventional WDR cameras while producing clear and vivid images.

*150dB WDR only available in 2MP X series

Improve bandwidth by up to 75% using WiseStream ${ m I\!I}$

When **Hanuha Techuin**'s original video compression technology WiseStreamII is combined with H.265 compression, the bitrate data data is reduced by up to 75% compared to current H.264 technology. The costs of configuring and maintaining the system are also greatly reduced, while still maintaining the same pixels and high quality.

WiseStream II OFF : 7160kbps WiseStream II ON : 74kbps

WiseStream II OFF: 7260kbps WiseStream II ON: 1817kbps

Clearer, sharper images in low light environments

Wisenet X series achieves optimal performance in low-light conditions by capturing and producing crystal-clear images regardless of the environment or time of day.

Digital Image Stabilization(DIS) with built-in Gyro sensor

Advances in Wisenet image stabilization technology allow for the reduction of motion blur caused by wind or vibration. A gyroscopic sensor plus DIS technology is specifically added to the Wisenet X series cameras resulting in sharp, stable images.

Fog Detection

Wisenet X series delivers outstanding image quality in foggy weather with Fog Detection. Any change in an image is automatically deleted with the defog function to provide a clear image.

Enhanced Video / Audio Analytics

Wisenet X series support a variety of exclusive Video and Audio Analytics, providing enhanced monitoring solutions and market intelligence.

Loitering detection

This feature detects when an object remain in a designated area longer than the time threshold set by user.

Queue management

This feature provides statistical analysis and measurement for average dwell time and number of people in queues. This insight is critical for business to manage their operations more efficiently, while providing the insight necessary to manage campaigns, displays and promotions throughout retail locations.

Sound classification

Wisenet X series camera help user respond immediately in case of situation in danger, so that can classify sound such as gunshot, glass breakage, scream and explosion.

Glass breakage

Scream

Explosion

More convenient installation with USB

Wisenet X series can connect cameras and mobile devices through USB and Wi-Fi. View angles can be checked immediately after installation using a smartphone. No additional devices are required, saving you time and money.

Dual SD slots

Dual SD slots allow up to 512 GB to be saved automatically to the camera, keeping data safe in the event of an unstable network. Obviously this allows to record more video footage than single SD slot.

Handover to PTZ

The handover feature allows a PTZ camera to receive an alarm(motion detection) from Wisenet X series camera operating on the same IP video surveillance system. Once the notification is received, the PTZ camera will zoom into the assigned camera pre-set location.

Explosion-proof Cameras

WISENET **T** series

Explosion proof cameras for hazardous environments

Heavy industrial facilities such as gas pipelines, petrochemical plants or oil refineries are potentially explosive because of flammable gases and dusts emitted. Therefore, it is important that a video surveillance system used in heavy industrial facilities is not the cause of explosions whilst still delivering high quality images. Wisenet T series explosion proof cameras satisfy both requirements by the powerful network camera and stainless steel housing enclosure surrounding it.

Stainless steel 316L enclosure to prevent explosions

T series explosion proof cameras are designed to be safely operated in hazardous areas with the special enclosure made of stainless steel 316L housing. The ATEX certified enclosure has the ability to contain any internal explosions or prevent sparks from escaping the device which may lead to a disaster.

Capture details with 2MP 32x optical zoom

Wisenet 2MP optical 32x zoom box camera is built in the explosion proof enclosure. 32x Optical zoom and 16x digital zoom helps users to see more further and clearly, capturing everything with sharpness without losing detail.

360° endless pan rotation and 255 preset mode

Wisenet explosion-proof camera is capable of monitoring a broad range, with its 360° endless pan and 180° tilt feature moving at 1~50° /sec preset speed. In addition, the camera's flexibility is increased by 255 preset positions, allowing users to save settings for pan/tilt functions and automatically view the location desired.

Defog technology to improve image clarity

Defog function is an image processing technology which helps increase image clarity in poor weather conditions such as fog or yellow dust. The visibility of the cameras can be enhanced in any weather condition so that users can monitor full-time.

True WDR(120dB)

The true WDR function built into the explosion-proof camera provides enhanced picture quality, by resolving different brightness in a scene.

360° endless pan rotation

Thermal Cameras

Detect people and objects 24/7 with thermal cameras

In challenging weather(fog, smoke, rain) or lighting conditions(complete darkness, backlight), it can be difficult to distinguish people or objects in a complex background by a visible camera or a human eye.

For accurate monitoring purposes, a professional surveillance system is required. Wisenet thermal cameras are the excellent choice : they provide high contrast images based on temperature differences between the object and background, so that users can detect incidents more easily. The advanced thermal imaging technology provides high contrast to make the unseen details visible without additional lighting.

Secure a wide variety of applications

Wisenet thermal cameras can be a powerful tool when monitoring applications where there is very little light, due to their ability to create images based on heat. Thermal cameras are especially applicable in manufacturing and industrial facilities, air and seaports, and mining areas.

- Industrial facilities
- Sea port

Mining areas

- City surveillance
- Bridges
- Power plants Dams Pipelines
- Border security Warehouse

Long detection range up to 3,157m

The main task of the thermal camera is to detect events that occur at long distances. Wisenet thermal cameras are equipped with a 35/19/13mm lens(Horizontal FoV 17°/32°/49°) to detect vehicles up to 3,157m away. The camera provides an image with high color contrast according to the temperature, so it can easily distinguish objects and background from a long distance. At closer range it can recognize the type of object or identify the characteristic by capturing details.

* The size of the human is vertically 1.8m(5.9ft) and vehicle is vertically 2.3m(7.5ft)

Multiple color palettes

Wisenet thermal cameras provide seven different types of color palette for users to select the best image in various situations. Each color palette has a specific set of colors which change according to the temperature range of the scene.

White hot

Enhanced video & audio analytics

Wisenet T thermal cameras offers reliable video and audio analytics for efficient monitoring. The featured analytics improves the overall security system's efficiency by automatically notifying users when abnormal behavior is detected.

Virtual line

Temperature change detection

Drastic temperature changes can be detected in advance to prevent incidents occurring. (20/40/60/80/100°C difference from current temperature)

* An alarm will be sent when a drastic temperature change is detected for a duration of 2 minutes.

Motion Detection

An alarm is triggered when movement is detected within the defined user area.

Shock detection

Shock detection protects the camera when events such as vibrations, quivers and shocks occur.

Alarm events are automatically triggered when the camera

detects the moving object crossing the virtual line.

Sound classification

Sound classification can help users respond immediately in dangerous situations, by classifying sounds such as gunshots, breaking glass, screams and explosions.

Glass breakage

Scream

Explosion

Improve bandwidth by up to 75% using WiseStream ${\rm II}$

When **Hanuha Techuin**'s original video compression technology WiseStreamII is combined with H.265 compression, the bitrate data is reduced by up to 75% compared to current H.264 technology. The costs of configuring and maintaining the system are also greatly reduced, while still maintaining the same pixels and high quality.

WiseStream II OFF : 7160kbps WiseStream II ON : 74kbps

Handover to PTZ

The handover feature allows a PTZ camera to receive an alarm from a thermal camera operating on the same IP video surveillance system. Once the notification is received, the PTZ camera will zoom into the assigned camera pre-set location. With this feature, PTZ cameras support the thermal camera by providing high resolution images whenever a specific detail is required.

WiseStream II OFF : 7260kbps WiseStream II ON : 1817kbps

VGA Thermal **Radiometric Camera**

(TNO-4041TR/4040TR/4030TR)

VGA Thermal **Positioning Camera** (TNU-4051T/4041T)

Temperature measurement to monitor incidents

The Wisenet thermal radiometric camera has added a feature to detect the temperature range of -20°C to +130°C. Alarms are generated and sent to users in case the temperature of three areas in the monitoring screen is above or below a defined value or the temperature increases or decreases beyond the preset range. In addition, the screen displays average/minimum/maximum temperature of the three areas for more thorough temperature measurement. With accurate temperature measurement, radiometric cameras are perfect for monitoring areas which can be difficult to detect by a visible camera.

Selected temperature range displayed in vivid colors

Using hybrid color palette, the selected range of temperature can be displayed in vivid colors, helping users observe monitoring areas with greater ease. The temperature out of the defined range is expressed in white hot color of black and white, ensuring the camera covers the entire monitoring areas with thermal detection.

Temperature of 3 areas displayed on screen

Hybrid color palette

Midrange-WH / Red-WH

Broad thermal monitoring with positioning

The TNU-4051T/4041T combines a thermal imaging camera and a positioning unit capable of monitoring a broad range, with its 360° endless pan and -90° to +40° tilt. In addition, the camera's flexibility is increased by 300 preset positions, allowing users to save the settings for pan/tilt functions and automatically view the location desired.

300 preset mode

Temperature Detection Thermal Camera

Identification

(TNM-3620TDY)

Visible image 2MP 4mm fixed lens (H : 87.6°, V : 46.4°)

Detection

Thermal image QVGA 4.7mm fixed lens (H : 50.0°, V : 36.4°)

Bi-spectrum camera with dual lens for visible and thermal imaging

TNM-3620TDY camera features both QVGA (320x240) thermal camera with 4.7mm fixed lens and 2MP (1920x1080) visible camera with 4mm fixed lens together. This camera can quickly screen high temperature and can recognize the object (who the person is) with visible camera.

Two detection modes support

Users can select two modes of detection in the camera according to their needs: estimated body temperature (EBT) mode and normal radiometric mode. Under the EBT mode, the camera can cover temperature range between 30~45°C, use AI to detect faces, and measure the temperature over the eye area as it is closest to the core body temperature. In the normal radiometric mode, the temperature between -20~130°C can be measured, making it ideal for fire-sensitive areas such as utility tunnels and plants or forest fire monitoring.

EBT(Estimated Body Temperature) mode

Normal radiometric mode

High accuracy with AI deep-learning technology

TNM-3620TDY utilizes built-in AI deep-learning technology to detect the human faces and generates alarms for only humans, making the monitoring more precise and efficient. Users can choose a channel between visible camera and thermal camera to detect human faces. When the thermal camera is selected as a channel to detect human faces. it only detects faces with fever. And therefore, the faces of mannequins or faces in photographs are not detected as shown in the image below. In addition, users can synchronize images of two channels by calibrating the image grid, so that the camera can detect the exact location of objects' faces and measure body temperature.

* it doesn't detect face of mannequins -

Simultaneous detection of multiple faces

TNM-3620TDY supports simultaneous detection of multiple faces in the distance between 1 to 3 meters. To increase the accuracy, Hanwha Techwin highly recommends installing and operating the camera in accordance with the US FDA's guidelines. According to the guidelines, measuring the temperature should be proceeded one person at a time. Using a separately sold blackbody (SBI-35B) is one of recommendations for more precise measurement.
